MEMORANDUM FOR THE RECORD

SUBJECT: Modular Adaptation for [] 1540 Light Table

1. A recent visit to [] disclosed that they are intending to deliver to NPIC their version of a 1540 light table for test and evaluation in the near future. Discussion with [] Vice President, Marketing, regarding the film loop slack box on their dual station interpretation system resulted in their offer to investigate the possibility of adapting the slack box to fit the 1540 light table.

2. The slack box is simply a perforated stainless steel bin into which the film is dumped. The associated capstan and transport rollers allow full transport control so that long distances between conjugate images (up to 100 feet) can be accommodated for stereo viewing.

3. The adaptation is anticipated to be modular so that it can be installed or removed from the light table as desired. Operation should be simple as there will be minimum film threading and the transport will be ganged to hold the conjugate images in position during scan or slew. No information is available on price or delivery at this time.
